

Magenta **Technical information**

Magenta is a web based application developed in Microsoft ASP.NET C#. The database required to run the application is Microsoft SQL Server 2000.

Magenta is a web based application developed in Microsoft ASP.NET C#. The database required to run the application is Microsoft SQL Server 2000.

Reports in the system are either exported as Excel files or as PDF documents generated via Crystal Decisions.

The system must be hosted on a server running Microsoft Windows 2000 OS or later.

If the system passes through the public domain then we strongly recommend the use of an 128bit SSL Certificate.

For more information about the technical aspects of the Magenta System please call or email us. You can find all our details on the contact page, or you can [click here...](#)
